

P360 KEY BPI TOOLS & TECHNIQUES

- **Strategic Master Planning** - needs identification and alignment of organization and long range infrastructure, services and product development.
- **Stakeholder Analysis**- the identification of your users, their needs and requirements. Stakeholders need and requirements feed the value stream of your organization and are critical to ensure your customers, both internal and external, are being adequately serviced.
- **Process Mapping** - an organizations processes become outdated and ineffective over time. Understanding current processes, is a first step to improve an organization. Our customers are commonly surprised when we map their current processes - revealing inefficiencies and gaps that were not imagined.
- **Supply Chain Optimization** – the integration of the entire supply chain (e.g. suppliers and installers) for full potential in terms of optimizing cost, schedule and quality.
- **Customized Standards / Specifications / Practices** - customizing of standards, specifications and practices that are appropriate to the application and not excessive to the defined needs of the specific facility.
- **Funding Analysis** - many organizations, especially government programs require a complicated system of federal, state and local involvement; often integrated with the program delivery. We ensure your funding mechanisms and capital allocations are wringing out every dollar.
- **Program/Project Controls** – The application of project control and monitoring tools to ensure programs are being delivered on time and on budget. Let us help you put these into place and create change control mechanisms to manage and account for changed conditions.
- **IT Solutions** - we have the ability to provide IT solutions to ensure your improved processes can be applied uniformly and efficiently across your organization. This step is commonly rounds out our service to improve your business processes.
